

# ExitProcWithLnPar

## Declaration

```
void __stdcall ExitProcWithLnPar(LinePar *Ln)
```

## Parameters

Ln	Pointer to <a href="#">LinePar</a> .
----	--------------------------------------

## Description

**ExitProc** (`_ExitProcWithLnPar@4` in Stdcall convention) is called before stopping the [D2000 KOM](#) (stopping [D2000 KOM](#) by a user, stopping [D2000 Server](#)). The function handling should be as fast as possible. You should realize that the D2000 KOM process could have been already stopped and the use of [call-back function](#) may be incorrect.
