

# GetDragDataText

## %SetDragDataText, %GetDragDataText functions

|              |                                                                                                                                                                                                                                                                                                                                           |       |                       |      |                                            |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-----------------------|------|--------------------------------------------|
| Function     | Function <b>%SetDragDataText</b> sets a text as a source of data for <a href="#">Drag&amp;Drop</a> .<br><br>Function <b>%GetDragDataText</b> returns a text string that is transferred during Drag&Drop. If the function <a href="#">%IsDragData</a> (0, _CF_TEXT) does not return @TRUE, the return value of this function is undefined. |       |                       |      |                                            |
| Declaration  | <div><pre>%SetDragDataText(<br/>    INT in refId,<br/>    TEXT in text<br/>)</pre></div> <div><pre>TEXT %GetDragDataText(<br/>    INT in refId<br/>)</pre></div>                                                                                                                                                                          |       |                       |      |                                            |
| Parameters   | <table><tr><td>refId</td><td>It always requires 0.</td></tr><tr><td>text</td><td>A text, which represents a source of data.</td></tr></table>                                                                                                                                                                                             | refId | It always requires 0. | text | A text, which represents a source of data. |
| refId        | It always requires 0.                                                                                                                                                                                                                                                                                                                     |       |                       |      |                                            |
| text         | A text, which represents a source of data.                                                                                                                                                                                                                                                                                                |       |                       |      |                                            |
| Return value | TEXT - returns the text value that is transferred during Drag&Drop.                                                                                                                                                                                                                                                                       |       |                       |      |                                            |
