

HI_SetBrowserStText

%HI_SetBrowserStText function

Function The function **%HI_SetBrowserStText** sets the object of *Status text* type for field, row or column of the *Browser* display. A type of status text is determined by the object of *Status text* ([control function](#)).

Declaration

```
%HI_SetBrowserStText(  
    INT in refId,  
    INT in _row,  
    INT in _col,  
    HBJ in stText  
)
```

Parameters

refId	Reference to displayer (reference variable).
_row	Row of the field.
_col	Column of the field.
stText	Reference to object <i>Status text</i> type.

Description The function sets the object of *Status text* type to specific item of *Browser* display. This setting can be cancelled by inserting 0 (zero) into the parameter *stText*.

Example

```
;status text setting for column No. 3  
%HI_SetBrowserStText (_browser, 0, 3, sttxt_Colors\HBJ)
```

```
;status text setting for field [2,3]  
%HI_SetBrowserStText (_browser, 2, 3, sttxt_Colors\HBJ)
```

Note 2 This function is available also in [%HIX_ version](#).
