

Naming of objects in Java

Naming in Java

The [naming](#) of objects in the D2000 System is different than in Java. In the D2000 System, it is possible to use a full stop (".") in the names of objects but Java language does not allow to use a full stop in the names. The full stop is replaced by a dollar sign ("\$\$") and the name must be written in small letters.

If the name of the D2000 object represents a keyword in Java it is supplemented by the string "\$\$\$".

Examples:

ESL	JAVA
S.Picture.Pressure	s\$picture\$pressure
public	public\$\$\$
