

# Installing of D2000 add-in to Microsoft Excel

**D2000 add-in** adds the components that provide the access to the values and other attributes of D2000 System objects to MS Excel. If **Excel** main menu does not contain **D2000** item, you must install D2000 add-in for MS Excel.

## How to install D2000 add-in

1. Choose **Add-Ins** from **Tools** menu.

If the list of add-ins does not contain **D2000**, click on **Browse** and define a drive, a folder and file name - **d2000.xla**.

2. Mark **D2000** in the list of add-ins.
3. Click on OK.

**Note:** The D2000 add-in, which you have selected in Add-Ins dialog box, remains active until you remove the mark.
