

Example (Requirement for value of object flag)

Requirement for value of object flag - example

DDE reference:

= D_2000|FLAGS!U.Kx_02_Ref_Plyn

This DDE reference returns the string, which contains the names of all flags of the current value of object *U.Kx_02_Ref_Plyn* that are TRUE. For example, if DDE reference returns the string "AB;", the A and B flag of current value is TRUE. The function [IsFlag](#) can be used to get the value of one particular flag.

= IsFlag(D_2000|FLAGS!U.Kx_02_Ref_Plyn, "A")

This function returns the value of A flag of instantaneous value *U.Kx_02_Ref_Plyn*.
