Access to the values of D2000 System objects

In **D2000 System** you can find two different types of information source. There are current values of object (live values) and archive objects that represent a value history in a time depth. Both the access to these values and work with them are different.

A decimal separator of real numbers is placed in the first character of a text string that is placed in registry:

 $\label{lem:hkey_current} \mbox{HKEY_CURRENT_USER\software\lipesoft\download} \mbox{LD2000V80\download} \mbox{D2DDE\script{RealSeparator.}} \\ \mbox{HKEY_CURRENT_USER\software\lipesoft\download} \mbox{LD2000V80\download} \mbox{LD2DDE\script{RealSeparator.}} \\ \mbox{HKEY_CURRENT_USER\script{NOOV80\download}} \mbox{LD2DDE\script{RealSeparator.}} \\ \mbox{HKEY_CURRENT_USER\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \\ \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \\ \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2DDE\script{NOOV80\download}} \\ \mbox{LD2DDE\script{NOOV80\download}} \mbox{LD2$

If it does not exist or is empty, the separator uses the settings of an operational system (Regional Settings).
