

Creating a New Workbook

Creating a new workbook from the template D2000_WorkBook.xlt

The previous topics contains the description and all information on creating a fully-functional report, that will be displayed (used) in the MS Excel environment. It is advisable to create a new report, designed for displaying in the process [D2000 HI](#), from the template D2000_WorkBook.xlt - the item **New** from the menu **File** and the directory **D2000** - the template *D2000_WorkBook.xlt*.

The template contains:

1. The sheet **D2000 Parameters**, that comprises of some [predefined and described cells](#).
2. The button [Calculate](#)
3. Support for [embedding the report](#) in the process [D2000 HI](#).
4. Support for [automatic \(periodic\) export](#).
5. Support for [automatic \(periodic\) printing](#).

Creating a report from the template doesn't exclude its end use in the MS Excel environment (de facto, it makes the creation easier).
