

Description (D2000 VBApi)

D2000 VBApi - interface description

The interface [D2000 VBApi](#) is conceived as a client process of the D2000 System. It provides the functions used to:

- [detect the interface state](#)
- [establish or cancel the connection with the D2000 Server](#)
- [trace the communication with the D2000 Server](#)
- [get the list of objects](#)
- [open/close the system object](#)
- [work with the current values of objects in the system](#)
- [work with historical values](#)
- [work with the log database](#)

The declaration of all functions, structures and constants, that are necessary for the operations mentioned above, is placed in the module [Interface](#) of the [VBapi.xla](#) file.
