

NewDefProc

Function

The function **NewDefinitionProc** is called by the interface [D2000 ObjApi](#) in case of creating or deleting a new/existing child.

Declaration

```
void NewDefProc(const ObjectDescriptPtr descrPtr, const UvarDataPtr uvarPtr)
```

Parameters

The parameters *descrPtr* and *uvarPtr* defines parameters of a new object - name, Id etc. If the item *status* of the parameter *ObjectDescript* is *Deleted*, given object was deleted and another items are not important.
