Distance between objects

Distance between graphic objects

The D2000 GrEditor contains the tools, that allow us to set equal distances between the graphic objects.

- Distance by two first objects in the X-axis direction
- Distance by the first and last object in X-axis direction
- Distance by the first two objects in Y-axis direction
- Distance by the first and last object in Y-axis direction

How to adjust the distances between graphic objects

1. Select the objects between which you want to adjust the equal distance. You may select 3 up to 100.
2. In the Edit toolbar click the appropriate button for the distance, or select the option **Distances** from the popup menu which opens after clicking the right mouse button over the object in a picture.
