

# Configuration dialog box (D2000/Creating Graphic Presentation Windows/D2000 GrEditor/Graphic Objects /Drawing Graphic Objects/Displayers/XY Graph)

## XY graph - configuration dialog box

Clicking the button **Configuration of XY graph** in the [Connect object](#) palette (or clicking the button **On-line graph configuration**  in XY graph window in the [D2000 HI](#) process) opens the configuration dialog box that consists of three tabs:

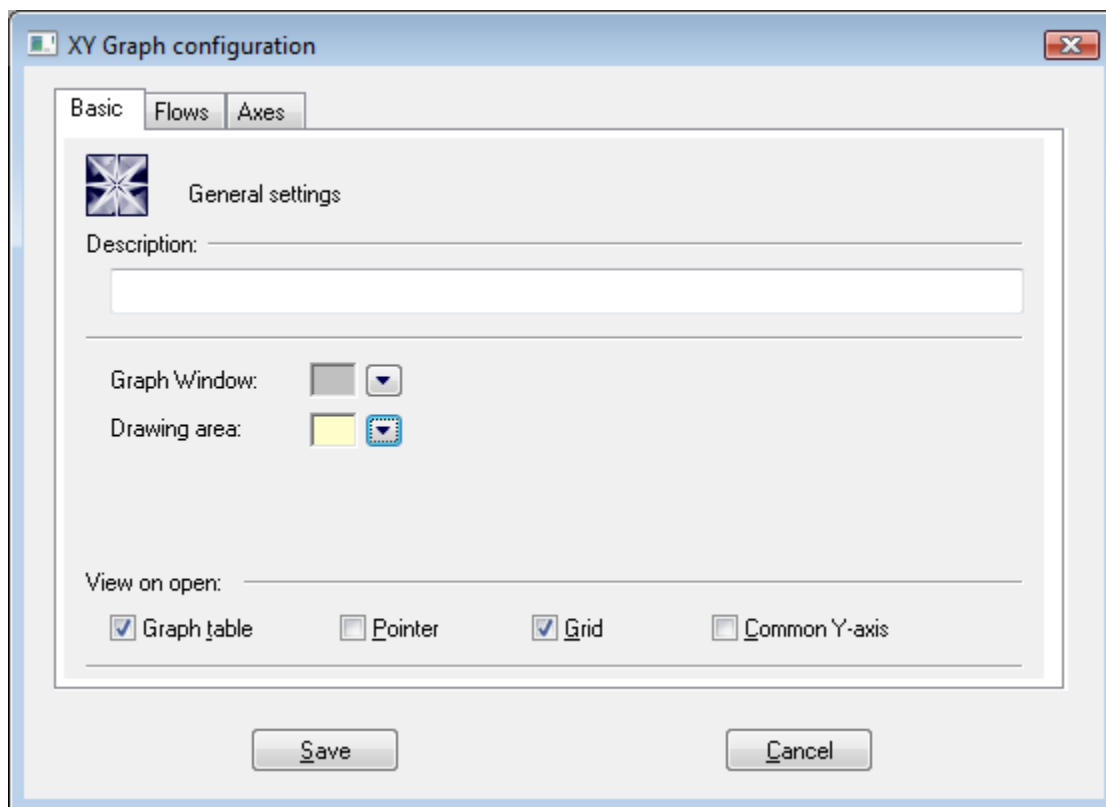

[Basic](#)

[Flows](#)

[Axes](#)

### Basic

The tab **Basic** of the configuration dialog box allows defining basic parameters of the XY displayer.

### Description

Text description describing the XY graph.

### Graph window

A color of the XY graph window is defined by selection from the [color palette](#) opened after clicking the arrow button placed next to the example of a currently selected color.

### Drawing area

A color of the XY graph drawing area is defined by selection from the [color palette](#) opened after clicking the arrow button placed next to the example of a currently selected color.

**View on open**

**Graph table**, **Pointer**, **Grid** and **Common Y-axis** checkboxes are used to show or hide the particular parts of the XY graph window after opening. Checked items mean that corresponding parts will be displayed after opening the XY graph. Descriptive graph table, pointer, grid and common y-axis settings may be enabled/disabled in the XY graph window by means of corresponding [buttons](#).

**Graph table \***

Shows/hides the descriptive XY graph table.

**Pointer \***

Shows/hides the pointer.

**Grid \***

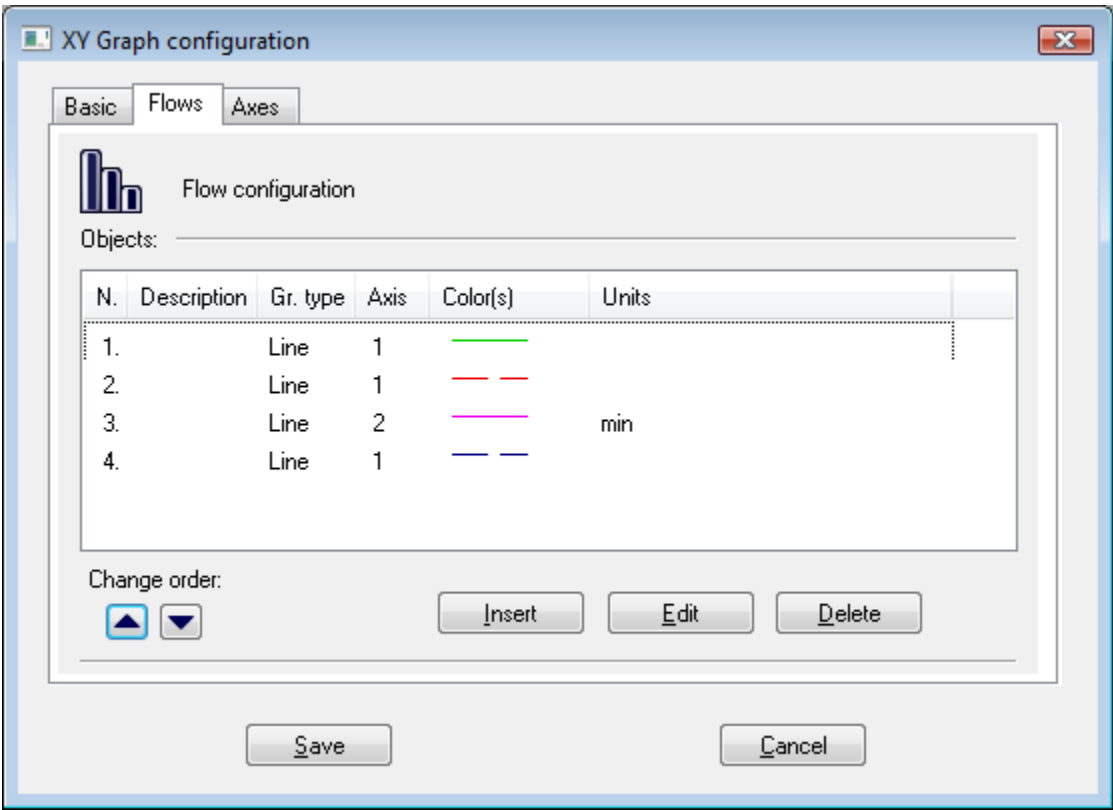

Shows/hides the raster grid.

**Common Y-axis \***

If the parameter is checked, there will be displayed one common Y-axis for all graphic flows in the XY graph window.

**Note:** \* Parameters cannot be configured in the [D2000 HI](#) process.

**Flows**

The list of flows contains flow description (the column **Description**) followed by graphic flow type (the column **Gr. type**). The column **Axis** contains the axis number for drawing the defined flow. In the column **Color(s)**, there are displayed colors of drawing together with additional information (line type, the pattern of flow area filling, selected mark,...). The column **Units** contain the technical units of the particular flow (description and units will be shown in the graph table).

The button **Change order** allows changing the order of flows in the list. The order is equivalent to the descriptive table of the XY graph.

**To add a new flow into the XY graph**

1. Clicking the button **Insert** opens the [Flow configuration](#) to define parameters for displaying the flow.
2. Click the button **OK**.

## To edit a flow configuration

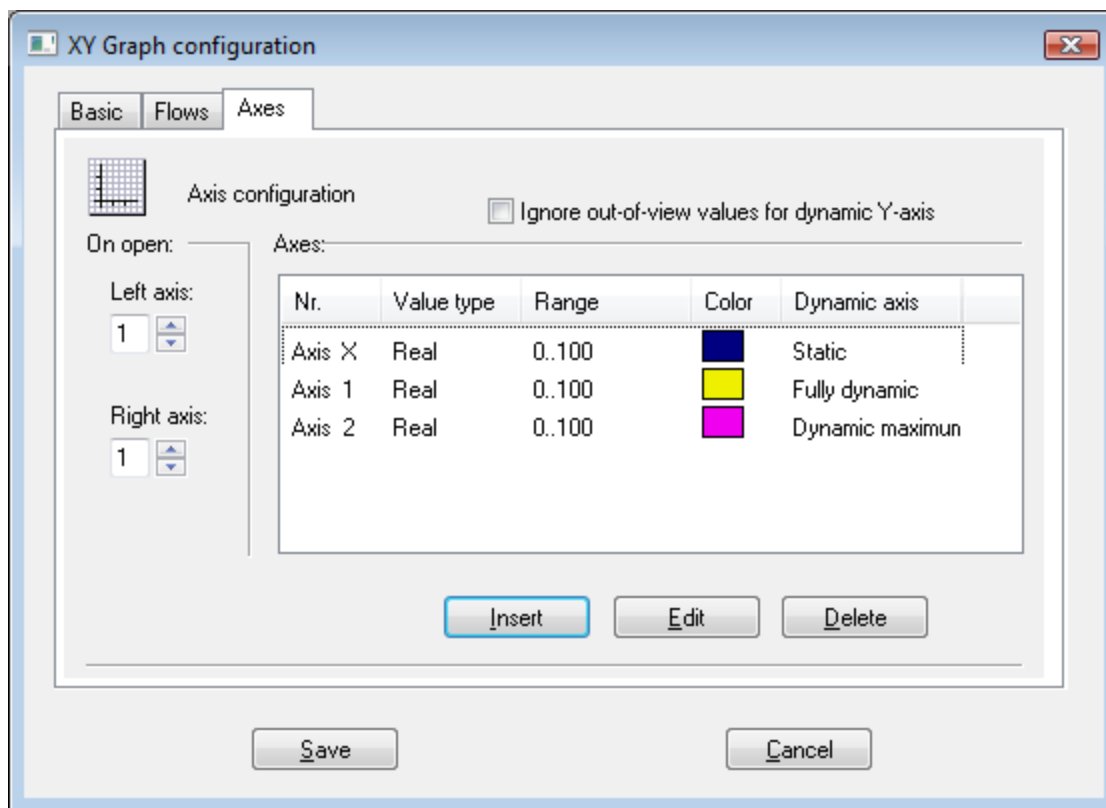

To modify the settings of a flow, double-click the required flow or select the flow and click on the button **Edit**. It opens the [Flow configuration](#) dialog box.

## To delete a flow

To delete a flow select the flow and click the button **Delete**.

**Note:**\* The operation cannot be done in the [D2000 HI](#) process.

## Axes

## Ignore out-of-view values for dynamic Y-axis

If the parameter is checked, the range of the dynamic y-axis will be determined by the values within the range of the x-axis. If the parameter is not checked, the values out of the defined time interval will also be taken into account.

## To define a new axis

1. Click the button **Insert**. It opens the [Axis configuration](#) dialog box to define the axis configuration.
2. Click the button **OK**.

## To edit the axis configuration

To edit the configuration of an axis click twice on the axis, or select the axis and click the button **Edit**. It opens the [Axis configuration](#) dialog box.

## To delete an axis

To delete an axis click on the axis and then click the button **Delete**.

**Note:** Deleting an axis assigned to a flow in the graph, displays the dialog box to define the number of an axis, which will be assigned to the object instead of the axis you are deleting.

**Change number of assigned axis**

Original axis number:    
 New axis number:

Change
