

# CloseRefToObject

## %CloseRefToObject function

**Function** The system is informed by the function **%CloseRefToObject** that the script has no interest in the Object Values.

**Declaration**

```
%CloseRefToObject(  
    HBJ in _hbj  
)
```

**Parameters**

<b>_hbj</b>	Value of the HBJ type or INT type.
-------------	------------------------------------

**Description**

The system is informed that the script has no interest in the Object Value (regardless of the number of the previous callings of the %OpenRefToObject function).  
If the function is not called by the script before its termination the function will be called automatically after the script termination.

**Note**

Object Values can be asked by the function [%OpenRefToObject](#).
