

FIO_WriteLine

%FIO_WriteLine function

Function

The function writes the specified text, followed by the line terminator, to the specified file.

Declaration

```
BOOL %FIO_WriteLine(  
    INT in handle,  
    TEXT in text  
)
```

Parameters

handle	Return value of a file, returned by the functions %FIO_Create or %FIO_OpenAppend .
text	Text to write.

Return value

@TRUE - text written, @FALSE - cannot write the text.

Note

Having finished the work with the file, it must be closed by calling the function [%FIO_Close](#). If execution of ESL script is terminated early, the [D2000 EventHandler](#) process will automatically close all opened files.
