

GetLastExtErrorMsg

%GetLastExtErrorMsg function

Function

The function returns the extended information about the last error in text format.

Declaration

```
TEXT  %GetLastExtErrorMsg()
```

Description

The extended information about an error is set by all the actions for work with the [database](#) (DB_*, PG_*, SQL_*, DBS_* + actions to control database transactions). Text value of an error is gained directly from the database engine, therefore this value depends on its type.
