

%LNG_GetLngIdxFromName

%LNG_GetLngIdxFromName Function

Function

The function gets a numeric language identifier from its name.

Declaration

```
INT %LNG_GetLngIdxFromName(  
    TEXT in _lngName  
)
```

Parameters

lngName	Text language identifier - language name.
----------------	---

Description

If the language given by the *_lngName* parameter is not defined or the language name is empty text, the function returns an invalid value.

Example

```
BEGIN  
    INT _lngIdx  
    _lngIdx := %LNG_GetLngIdxFromName("SK")  
  
    TEXT _lngName  
    _lngName := %LNG_GetLngNameFromIdx(_lngIdx)  
END
```
