DINI ARGEO DFW06 Control Panel

Supported device types and versions

This protocol is implemented in D2000 via ESL script using the Generic User Protocol. The implementation communicated with Pentimex PREMOVA 60-2-8 and Pentimex PREMOVA 60-3-8 platform scales with a capacity of 60 tons used for weighting cargo vehicles. These scales were connected to a DINI Argeo DFW06 control panel, which communicated via a serial port with an application Cestná váha by VTnet company on a PC.

The implementation of the protocol supports separate polling of the control panel as well as eavesdropping on existing communication.
