

StrToHBJ

%StrToHBJ function

Function	The function returns the unique identifier (HOBJ) of the system object given by its name.		
Declaration	HBJ %StrToHBJ(TEXT in objName)		
Parameters	<table><tr><td>objName</td><td>Text expression.</td></tr></table>	objName	Text expression.
objName	Text expression.		
Description	The function sends a query to the D2000 Server process to detect the unique identifier of the system object defined by the parameter <i>objName</i> . If the object doesn't exist or the parameter is an invalid value, the function returns invalid value.		
Example	INT _hobj _hobj := %StrToHBJ("Sec") IF _hobj # Sec\HBJ THEN ; error (condition must not be met) _hobj := 0 ENDIF In the example, the object's HOBJ is detected in two ways.
