

# XY graphs (Work with D2000 HI)

**XY graph** is a graphic displayer. It allows displaying a graphic flow of values specified by coordinates (x, y) from picture script. XY graph is not a D2000 system object (unlike object of *Graph* type) and is always part of object of *Picture* type.

The process [D2000 HI](#) allows [editing](#) XY graphs only, they are being created in the process [D2000 GrEditor](#).

Each XY graph allows to display at most 20 flows at the same time.
