

TimeToItems (Call-back Functions)

Declaration

```
bool32 (_stdcall *TimeToItems)(D2Time Tm, unsigned int *Year, unsigned int *Month, unsigned int *Day, unsigned int *Hour, unsigned int *Min, unsigned int *Sec, unsigned int *Msec);
```

Parameters

Tm	Time in the D2000 system format.
Year, Month, Day, Hour, Min, Sec, Msec	Pointers to the individual items, where values are written in the range according to the function TimeFromItems .

Description

The function splits up a time, which is in the D2000 format, to individual items.
