

TraceComErrorFile

Declaration

```
void (_stdcall *TraceComErrorFile)(HOBJ LnID, char *FileName, unsigned int  
MaxFileSize, char *Str);
```

Parameters

LnId	Communication line ID .
FileName	File name.
MaxFileSize	Maximal size of log file.
Str	Array of character that is about to save into the log file.

Description

The procedure enables to save an error record into a log file that is defined by *FileName* parameter. The files are saved into [Trace](#) directory of an application.

Note: *FileName* can also contain directory names, e.g. "subdir1/mylog.txt" or "../anotherdir/mylog.txt".
