# GetStation

**Declaration**

```
void (_stdcall *GetStation)(HOBJ LnID, char *Adr, StationParPtr *StParPtr);
```

**Parameters**

| | |
|---|---|
| LnID | ID of line, which is the parent of the station. |
| Adr | Station address. |
| StParPtr | Pointer to the StationPar structure. If the value of the pointer is NULL, the station was not found. |

**Description**

According to the parameter *Adr,* the function finds the station and returns the pointer to a StationPar structure if it exists, otherwise it returns NULL value.
