LST_GETINFO

LST_GETINFO action

Function

Action detects the total number of records in list of objects.

Declaration

```
LST_GETINFO h, nrObjs
```

Parameters

h	in	Identifier of the *Int* type - unique handle on created list of objects.
nrObjs	out	Identifier of tge *Int* type - total number of objects in list (it is not number of objects on one page!).

Description

Action detects the total number of records in list of objects.
If entered handle on list does not exist, event generates an error **ERR_NO_DATA**.

Example

Work with list of objects (LST... actions).
