

Requirement for flag of archive value

The format of [DDE reference](#) that enables to get a flag of object value is:

= D_2000|ARCH_FLAGS!bIname_N

D_2000 - DDE Server name (required)

FLAGS - requirement for flag of object

bIname_N is a string consisting from:

- **bIname** - logical name of archive block (COM_ID)
- **N** – consecutive number of archive value within the archive block

DDE reference returns a string. If the flag is TRUE, the string contains the proper character (A..P). The function [IsFlag](#) returns the value of particular flag.

The example of DDE reference is - [here](#).
