

OnColumnClick

OnColumnClick picture event

Declaration

Global handler:

```
ENTRY OnColumnClick(IN INT _refId, IN INT _column)
; script actions
END OnColumnClick
```

Special handler:

```
ENTRY XXX_OnColumnClick(IN INT _column)
; script actions
END XXX_OnColumnClick
```

Parameters

_refId	Parameter of INT type (required for global handler).
XXX	Name of Reference variable connected to graphic object (without the character "_").

Description

The picture event is being generated if the user left-clicks the column header in display of [Browser](#) type. The parameter *_column* is the serial number of the columns.

Example

Special picture event handler:

```
; picture event handler: Left-clicking the column header
```

```
; in displayer of Bowser type with reference variable _List assigned
```

```
ENTRY List_OnColumnClick
```

```
; script actions
END List_OnColumnClick
```

Global picture event handler:

```
; picture events handler: Left-clicking the column header
```

```
; in the displayers of Browser type that has no
```

```
; special picture event handler defined
```

```
ENTRY OnColumnClick(IN INT _refId, IN INT _column)
```

```
; _refId - value of reference local variable assigned to graphic object
IF _refId = _List THEN ; test that determines the Browser, the picture
event occurred
```

```
; script actions
```

```
ENDIF  
END OncolumnClick
```

Note

If both the handlers are defined in picture script, global handler will never be called for _refId=_List, because a special handler is already defined.
