InsertElPrio

Declaration

```
  void (_stdcall *InsertElPrio)(LinListH List, void *DataPtr, unsigned int
HighPriority);
```

Parameters

List	Handle to a linear list.
DataPtr	Address of inserted data that are allocated by call-back function GetMem.
HighPriority	Binary value of priority. If HighPriority = 0, the data is inserted at the end of the list, otherwise at the beginning.

Description

The function inserts an item to the linear list into a position, which depends on *HighPriority*.
