XML_AddElement

%XML_AddElement function

Function

The function adds an XML element.

Declaration

```
INT %XML_AddElement(
    INT in node,
    TEXT in elementName
 )
```

Parameters

node	Handle to parent XML node.
elementName	New element name.

Return value

Handle to the XML element added.

Description

The function adds an XML element to the defined parent XML node. Parent node can be a document or other element.

Example

```
INT _doc
_doc := %XML_CreateDocument()
INT _el
_el := %XML_AddElement(_doc, "element")
```
