

# Application Database Management

The D2SMC process allows you to export to a file and import the contents of a configuration, log and archive database from a file. Functionality is supported for the PostgreSQL DB platform.

Import or the export can be called up from the context menu of the application

Open
New Archive
Add to Redundancy
Edit
Delete
Password
Upgrade Application into D2000 9.1 (ASA12)
Import configuration database...
Import log database...
Export configuration database...
Export log database...
Run
Stop

or archive.

Edit
Delete
Import archive database...
Export archive database...
Refresh

After starting the export, a dialog box opens with the path and file name in which the contents of the database will be saved.
