# Application Database Management

The D2SMC process allows you to export to a file and import the contents of a configuration, log and archive database from a file. Functionality is supported for the PostgreSQL DB platform.

Import or the export can be called up from the context menu of the application

or archive.

After starting the export, a dialog box opens with the path and file name in which the contents of the database will be saved.

Export database

Local Disk (C:) ▸ D2000 ▸ D2000_APP ▸ pga61 ▸ backup
