System installation (Linux)

The following components of the D2000 application server are ported to the Linux OS:

- D2000 kernel
- alarm
- archiv
- arcsynchro
- calc
- d2connector
- d2ping
- dbmanager
- edaserver
- event
- gtwcli
- sas
- switch
- sysconsole
- tcldeployer
- tcts
- tell
- topology

Only the Software Key is supported for license verification.

The D2000 uses the PostgreSQL or Oracle Database database engine to store and monitor the configuration.

> ⚠️ **Java Runtime Environment**
>
> The D2000 Linux application server uses the OpenJDK
