

Distance between objects

Distance between graphic objects

[D2000 GrEditor](#) contains the tools, which allow to set the equal distances between the graphic objects.

- Distance by two first objects at X-axis direction
- Distance by the first and last object at X-axis direction
- Distance by the first two objects at Y-axis direction
- Distance by the first and last object at Y-axis direction

How to adjust the distances between graphic objects

1. Select the objects between which you want to adjust the equal distance. You may select 3 up to 100.
2. In the [Edit](#) toolbar click the appropriate button for the distance, or select the option **Distances** from the [popup menu](#) which opens after clicking right mouse button over the object in a picture.
