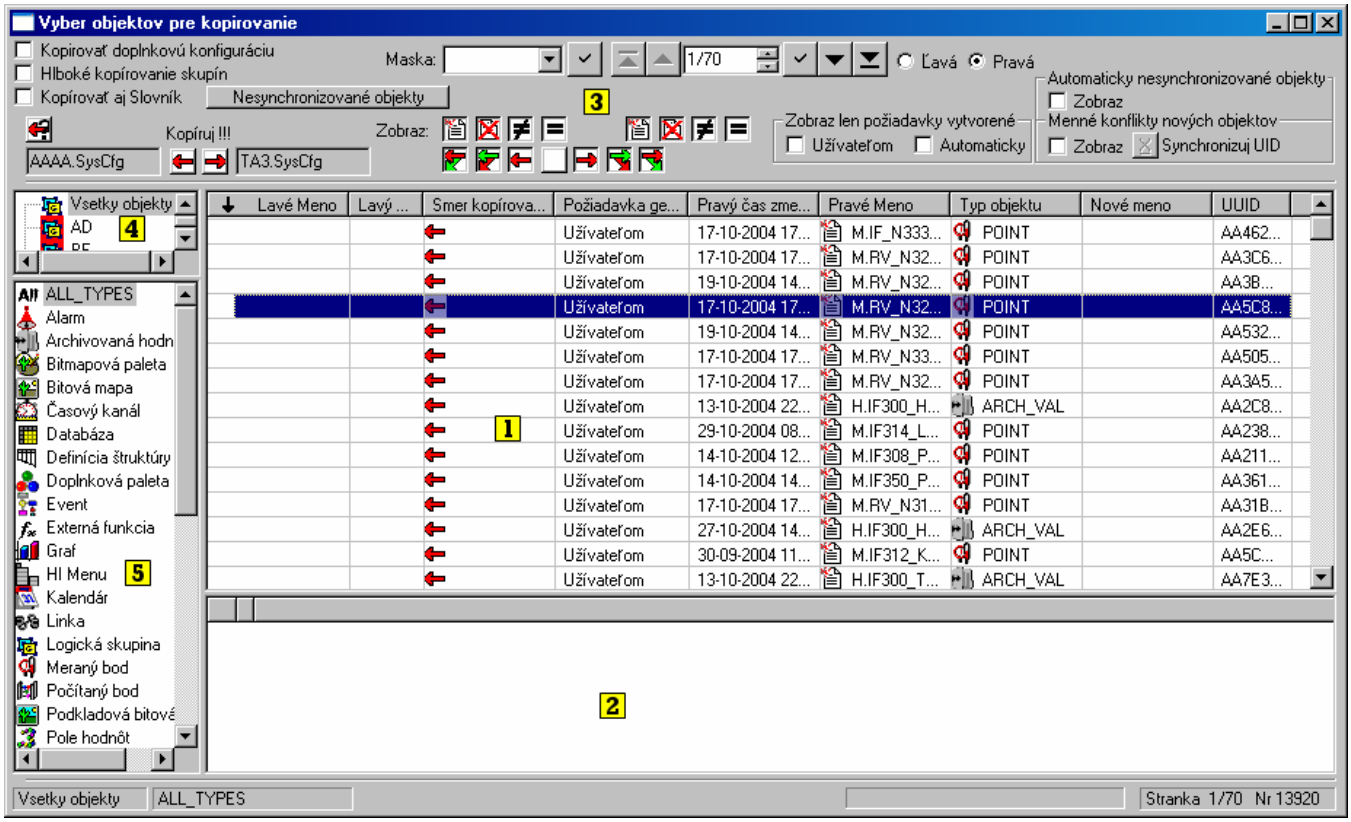
Total synchronization of databases for redundancy

After selecting the **Total synchronization of database for redundancy** in the menu **Databases** in program D2000 CfgSynchro, the following dialog window appears:



The window can be divided into five main parts:

1	List of objects to copy.
2	Information on the progress of copying that is displayed in a similar way as in the Progress window.
3	Control panel
4	Tree structure of logical groups.
5	List of object types.

Note: Before opening the window the copy request is automatically set according to the definition specified in the chapter **Synchronization** - Complete database synchronization in a redundant system.
