

# List filtering

The list of objects in the window [List of objects to copy](#) (part 1) can be filtered by:

1. **Object type** - chapter [List of object types](#)
2. **Copy request** - parameter [Display](#)
3. **Object's state in database** - parameter [Display](#)
4. **Object's name in database** - parameters [Mask](#) and [Left / Right](#)
5. **Way of creating copy request** - parameter [Show only requests created...](#)
6. **Membership in a logical group** - chapter [Tree structure of logical groups](#)
7. **Membership in a list** [Unsynchronized objects](#)
8. **Name conflicts** - parameter [Name conflicts of new objects](#)
9. A combination of above mentioned options\*

**Note:**

In case of displaying name conflicts (8) the list is only filtered by name (4) and membership in a logical group (6).  
When unsynchronized objects (7) are displayed the list cannot be filtered by object's state (3).
