OnMouseLeave

OnMouseLeave picture event

Declaration

Global handler:

```
ENTRY   OnMouseLeave(IN INT _refId)
; script actions
END  OnMouseLeave
```

Special handler:

```
ENTRY XXX_OnMouseLeave
; script actions
END XXX_OnMouseLeave
```

Parameters

_refId	Required input parameter of **INT** type for global handler.
XXX	Name of the reference variable assigned to graphic object (without the character "_").

Description

The picture event is being generated when the mouse cursor leaves the area of the graphic object with the given reference variable.

Example

Special picture event handler:

```
ENTRY List_OnMouseLeave
```

```
  ; actions
END List_OnMouseLeave
```

Global picture event handler:

```
ENTRY OnMouseLeave(IN  INT _refId)
```

```
; _refId - value of the reference local variable assigned to graphic object
  IF _refId = _List THEN
```

```
     ; actions
```

```
  ENDIF
END OnMouseLeave
```

Note

If both the handlers are defined in picture script, the global handler will never be called for _refId=_List, because a special handler is already defined.
