

Complete synchronization of databases

D2000 CfgSynchro - complete database synchronization

The initial setting of copying objects for this type of synchronization forces all changes in the destination database to be suppressed. New objects are going to be deleted and changed objects overwritten according to the configuration in the source database.

Initial setting of copying

Right \ Left		None	New	Deleted	Modified	Constant
None			←			
New	←			←		
Deleted			←			
Modified					←	←
Constant					←	

←	direction of copying
	combinations that may occur, but the changes will not be synchronized

Note: If a program has been started with the parameter `/NO_OBJLIFE`, the object life logs are not synchronized.
