Assignment of application module parameter

Dialog window displays the list of application module parameters. In this dialog window the parameter of configuration property is assigned to the object.

There are two ways of its opening:

- Form the pop-up menu in selection window -> the item **Parametrize parent**.
- Form the pop-up menu in selection window -> the item **Used configuration properties**. It opens the dialog window Configuration properties in which if you doubleclick on the object the modal window **Application module parameter** will open.
