JSON_ObjectToString

%JSON_ObjectToString function

Function

Gets a text representation of the JSON object.

Declaration

```
TEXT %JSON_ObjectToString(
    INT in handle,
    BOOL in pretty
 )
```

Parameters

handle	Handle to JSON object.
pretty	Multi-line formatting of output

Return value

None

Description

Function gets a text representation of the JSON object.

Exception is thrown if handle to the JSON object is invalid.

Example

```
INT _obj
_obj := %JSON_CreateObject()

%JSON_ObjectSetValue(_obj, "Name", "John Smith")

TEXT _txt
_txt := %JSON_ObjectToString(_obj)

%JSON_FreeObjectHandle(_obj)
```
