

JSON_ObjectFromString

%JSON_ObjectFromString function

Function Creates a JSON object from a string.

Declaration

```
%JSON_ObjectFromString(  
    TEXT in text  
)
```

Parameters

text	Text representation of JSON object
-------------	------------------------------------

Return value

Handle to the JSON object, must be released by [%JSON_FreeObjectHandle](#).

Description

Function creates a JSON object from a string.

Exception is thrown if the given text cannot parse to the JSON object.

Example

```
INT _obj  
_obj := %JSON_ObjectFromString('{ "state": "Valid" }')  
  
%JSON_FreeObjectHandle(_obj)
```
