

IToStr

%IToStr function

Function

The function converts the specified expression to a value of *Text* type (string) in decimal or optionally different numeral system.

Declaration

```
TEXT %IToStr(  
    INT in Arg  
    [, INT in Base]  
)
```

Parameters

Arg	Function argument.
Base	The base of the numeric system into which the number is converted (2 - 16). If it is not specified, a decimal numeral system is used.

Example

```
TEXT _s  
  
_s := %IToStr ( 500 )           ; returns string "500"  
_s := %IToStr ( 255, 16 )      ; returns string "FF"  
_s := %IToStr ( -8, 2 )        ; returns string "-1000"
```
